Starting Truss Database Manager

Two ways to run Truss database manager:

• Choose Truss Database Manager directly from “Truss+” menu;
• Choose Truss database from the ‘Truss system configuration’ window.
Parameters

Truss type parameter meanings are shown in pictures. Parameter **Angle** predefines rotation angle of webs and chords.
Creating New Types

• Click the button *Create new type*.
• Select new web/chord types and click the *Create* button.
Truss Type name

- ‘Type name’ will represent all parameters that you set for your new truss type.
Deleting Types

- If you want to delete a truss type that doesn’t meet your regional defaults, click the *Delete type* button.
Notes

• Make sure that all truss categories (classes) have the same types.
• If at least one of the truss categories has less types, name of this type will contain the note “not in all families”.

Notes

Three options to avoid this:

• Delete that type of truss one by one from all categories using the command Delete type;
• Delete that type of truss from all categories with one click. Use the command Delete type;
• Create that type of truss in all categories using the command Create missing types.
